# INNOVATIVE SOUND ABSORPTION STRUCTURE

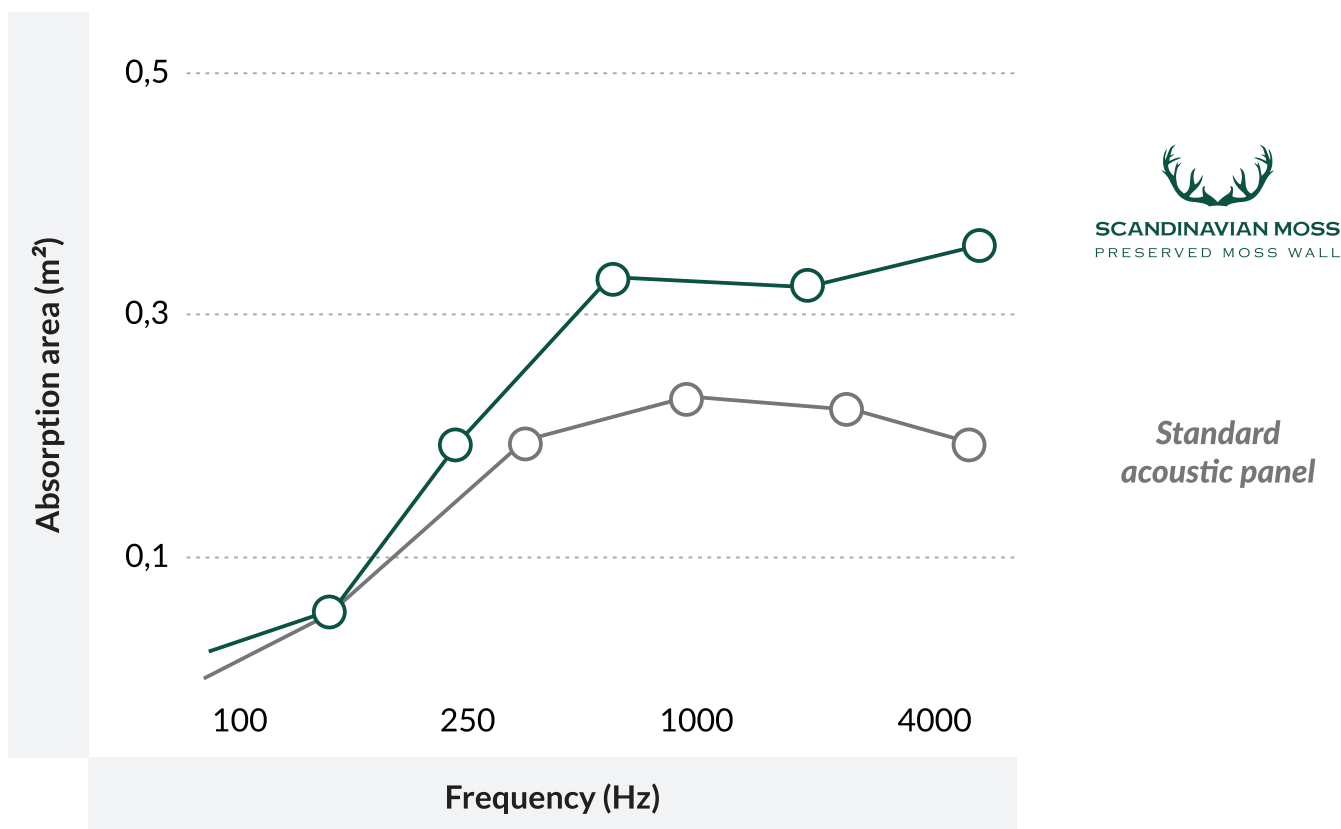

**Long reverberation time is one of the most common acoustic problems faced by interior designers.**

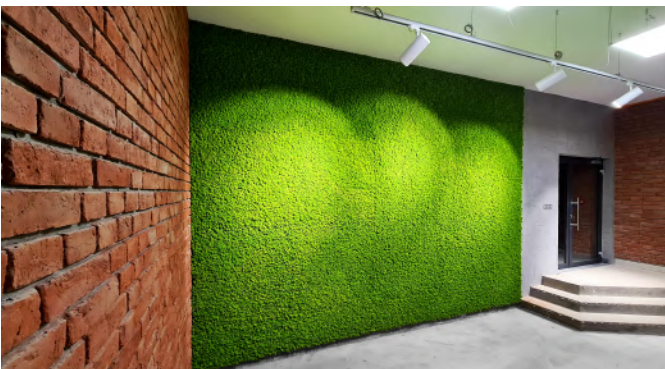

Modern architecture has introduced spacious interiors accompanied by hard and flat surfaces. They can cause long reverberation times and annoying echoes. Scandinavian Moss has developed a proprietary moss panel with a patented 3D absorber formula.

**The advantages of the product are the sound-absorbing board and the perfect moss structure, which has been lay out in the appropriate internal density.**

The stabilized moss used for 3D panels has been selected from all-year-round collections. When making moss acoustic panels, the late period, the most mature, with a highly dense structure is used.

# MOSS TYPES

## REINDEER MOSS

---

Reindeer moss is harvested from the forests of Scandinavia, Finland and Iceland. It is a 100% natural product. It has been permanently impregnated. Due to the ease of application of reindeer moss, it is used as a component in the creation of various products, such as panels or moss pictures.

## FLAT MOSS

---

Forest flat moss, also known as grass moss, obtained naturally through manual harvesting from private forests in France and Sweden. Flat moss is suitable for gluing panels as a moss decor, and also as a grassy moss on a wall, known as a "green moss wall". It goes very well in compositions with ball moss.

## BALL MOSS

---

Ball moss, also known as round or tuft moss, is obtained naturally through manual harvesting from private forests in France. Decorative tuft moss is suitable for gluing panels as a decor of forest moss, and also as a round moss on a wall, it creates a "green moss wall". Ball moss goes very well with grass moss, being a natural composition on the wall. Dark tuft moss perfectly harmonizes with the background of dark grass moss.

# REINDEER MOSS

## FINNISH (FOR MOSS WALLS)

Scandinavian Moss reindeer moss is harvested from the forests of Finland. It is a 100% natural product. Moss is cleaned and contains small amounts of impurities in the form of needles. Due to the dense, thick heads of even color, it is intended for creating green walls.

## NORWEGIAN (DECOR)

The reindeer moss is harvested from the forests of Norway. It is a 100% natural product. It has a dense structure due to the dyeing process in sheets. It contains natural impurities in the form of needles in the root layer. It has a non-flammability and ISO quality certificate.

## ICELANDIC (FLORISTIC)

Reindeer moss is harvested from Iceland's forests. It is a 100% natural product. It is characterized by a thinner head with a gray gradient color. It contains natural impurities in the form of needles. It is intended for the floristic industry, flower exchanges and less demanding customers.

# REINDEER MOSS PROPERTIES

## **100% NATURAL**

100% real natural Reindeer Moss (*Cladonia rangiferina*) is soft and pleasant in touch.

## **ANTISTATIC**

Reindeer moss has antistatic properties. The moss does not collect dust.

## **HYPOALLERGENIC**

Reindeer moss does not cause allergies. It does not contain toxic chemicals and is safe for children and pets. It is not edible.

## **SOUND ABSORBING**

Excellent sound absorber. It absorbs vibrations up to 2x more than other 3D panels of the same size and thickness.

## **MAINTENANCE-FREE**

Prepared moss does not require any maintenance. It does not need light, watering or pruning as it is permanently impregnated.

## **AIR CLEANSE**

Air particles are filtered throughout the whole process of absorbing and releasing moisture from the environment.

## **HUMIDITY INDICATOR**

Prepared moss dries up when the air humidity drops below 40%, and becomes soft when the humidity exceeds 40%, i.e. the standard humidity in home spaces.

## **IN HARMONY WITH NATURE**

Scandinavian Moss Reindeer Moss comes from Scandinavian plantations and is harvested in accordance with applicable regulations. Harmless dyes are used to obtain colors.

# MOSS COLOR

## SCANDINAVIAN MOSS REINDEER MOSS INTENDED FOR GREEN WALLS IS AVAILABLE IN THREE BASIC SHADES OF GREEN COLORS.

**Spring green**  
*Jasna zieleń*

**Medium green**  
*Średnia zieleń*

**Dark green**  
*Ciemna zieleń*

### **REINDEER MOSS IS A PRODUCT 100% NATURAL**

*Origin and time of moss harvest has an influence on its appearance, structure and color.*

*There may be needles in the carton.*

*Scandinavian Moss offers 26 different colors.  
Colors may differ from supply.*

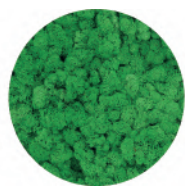

Finnish reindeer moss from Scandinavian Moss is the highest quality product out of all available on the market.

# FREQUENTLY ASKED QUESTIONS 1-3

## Is stabilized moss a living product?

The moss has been impregnated, thanks to which it retains its natural appearance and structure. In a biological sense, it is not living moss and it does not grow. It does not require watering, pruning or sunlight.

1

## How should moss be cared for?

Moss only requires a standard air humidity in the range of 40-60%, which is usually maintained indoors. Moss draws moisture from the air. In case of too low humidity in the rooms, it is recommended to start the air humidifier. It will even out the humidity in the room, improving the health condition of both household members and moss, making it soft and flexible again. However, it is not recommended to place moss in places of direct exposure to water.

2

## Does the moss react to too high a temperature?

Moss should be located away from direct heat sources (at least 2 meters from radiators, fireplaces) and should not be exposed to direct sunlight, e.g. near large windows that heat up. During the heating period, when the air in the rooms becomes dry, it is recommended to use an air humidifier or spray the vicinity of the moss with water mist.

3

# FREQUENTLY ASKED QUESTIONS 4-6

## Is moss safe for allergy sufferers?

There are no contraindications. Moss is impregnated with e.g. glycerin, thanks to which it will not sensitize allergy sufferers. What's more, it is an ideal growth for allergic people, as it filters the air from toxins, dust or unpleasant odors. The aforementioned glycerin also ensures that the moss does not lose its moisture and softness. It is a natural indicator of humidity. Scratching the throat, dry eyes, heavy breathing - these are just some of the examples of that the air in the building is too dry.

4

## Does moss attract dust?

No, because impregnated moss is antistatic, so it does not attract dust, insects and microorganisms, and even construction dust.

5

## Can moss be installed in the bathroom?

Yes it can. Preserved moss does not need sun, so you can easily use it in rooms without access to windows. In the bathroom, moss can play not only a decorative role - because moss is highly hygroscopic, it will absorb excess moisture from the air, preventing the growth of fungi and mold!

# CUSTOMIZED PREMIUM MOSS PANELS

## 100% NATURAL

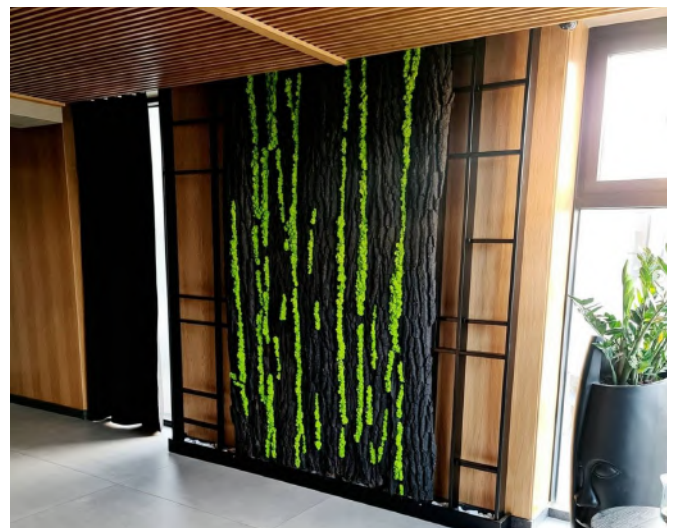

Scandinavian Moss panels are produced in such a way to make self-installation as easy as possible. The panels are made of a light and thin moisture-resistant board. They are available in 50x50cm modules, to be joined into a moss wall or made to measure.

Moss has a heterogeneous structure, therefore, after joining the panels, the joints are not visible, they interlock to form a uniform wall. On special request, we can create a frameless moss panel with a semicircular edge finish, thanks to which the board cannot be seen. Thanks to this procedure, it may look like the panel is an image and has grown straight out of the wall.

- ✓ **Execution:** 100% handmade
- ✓ **Application:** walls and ceilings, to be joined together
- ✓ **Dimensions:** 50x50cm, to measure
- ✓ **Panel thickness:** approx. 3-6cm with a board (depends on the moss type)
- ✓ **Moisture-resistant board thickness:** 4-5mm
- ✓ **Moss structure:** soft, composed of tufts
- ✓ **Finishing the edges with moss:** none / semicircular finish
- ✓ **Colors:** all colors from the palette (pages 13, 14)
- ✓ **Panel weight (50x50cm) :** 1,5-3,0kg (depends on the moss type)
- ✓ **Panel material:** reindeer moss, ball moss, flat moss, a composition of different types or colors
- ✓ **Execution time:** off-the shelf or made to measure up to several working days

# HOW TO PREPARE MOSS PANEL BY YOURSELF?

Green walls are great complement for the modern design interiors. We can give them almost any shape. How to make a natural wall decoration all by yourself? It's easy!

## Required accessories:

- ✓ moss
- ✓ floristic glue
- ✓ moisture resistant board
- ✓ dowels or mounting glue
- ✓ hot glue gun

download certificates:

[www.scandinavianmoss.com](http://www.scandinavianmoss.com)

## How to make a green wall? Step by step.

- 1** Before starting work, calculate how much moss will be needed to complete the project. The estimated consumption for Finnish reindeer moss is  $\sim 6,0\text{kg}^*/\text{m}^2$ , for Norwegian reindeer moss  $\sim 7,5\text{kg}^*/\text{m}^2$ , for ball moss  $\sim 2,0\text{kg}^*/\text{m}^2$  and for flat moss  $\sim 1,2\text{kg}^*/\text{m}^2$ .  
\*the weight of the moss may vary depending on the humidity
- 2** Grab a tuft of moss and trim the root layer to the appropriate height for you (the optimal height for a reindeer moss is approx. 6 cm).
- 3** Then, using a glue gun, apply hot floristic glue to the bottom of the moss and attach the moss to the board.
- 4** Put the moss tufts side by side, close to each other without gaps. Do not squeeze the moss too tight to make the structure spread.
- 5** After the board are finished with moss, grab the panel and attach it to the wall with dowels or mounting glue. Ready!

# READY MOSS WALL

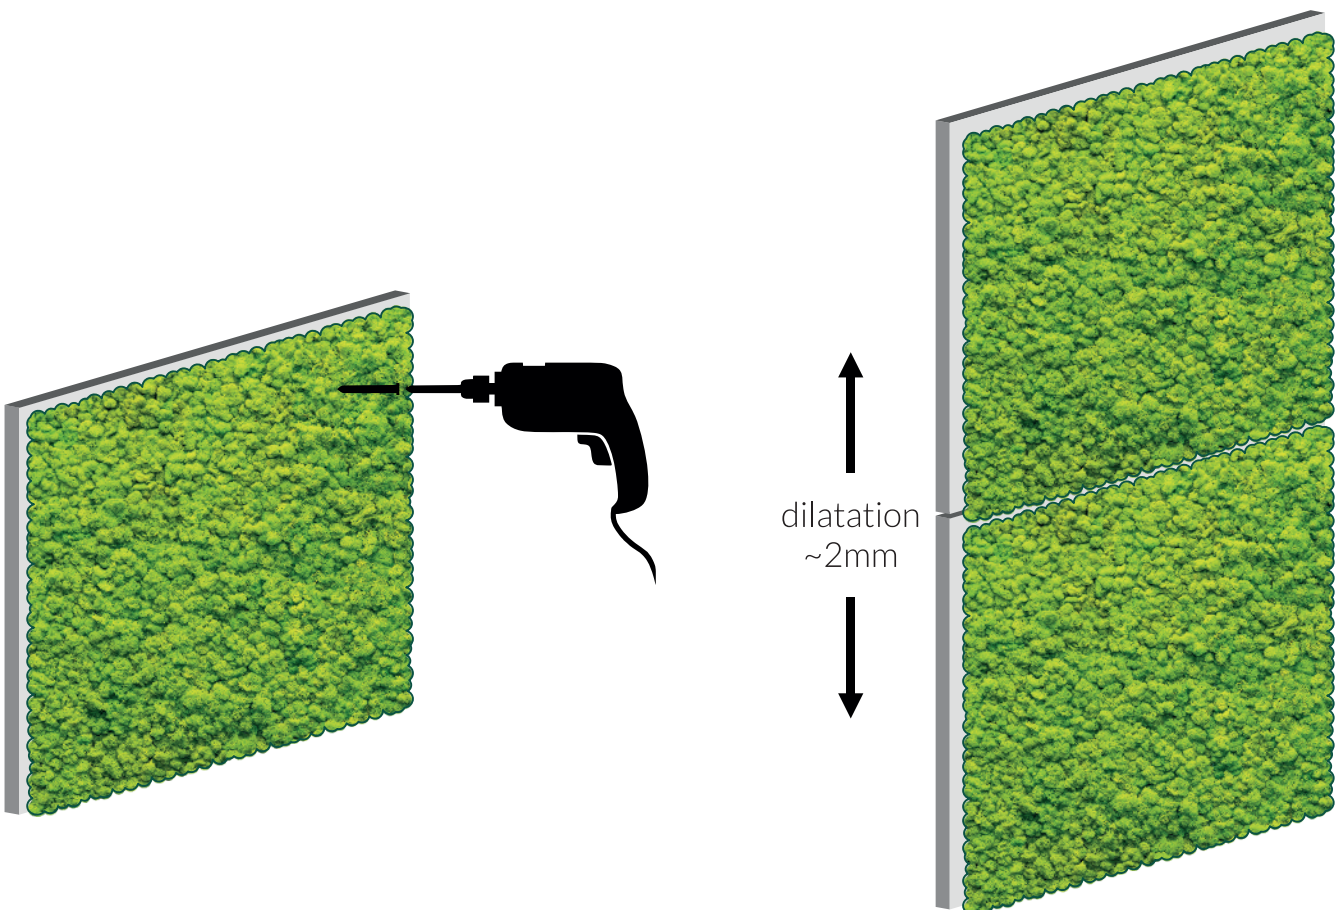

If you need to cover a larger area, and you lack the time or experience to create an even, aesthetically-looking moss structure, you can count on Scandinavian Moss. We will take care of your order comprehensively with mounting the panel in the designated place. As a result, the surface of Scandinavian Moss panels will be aesthetically finished, giving the interior a luxury and a unique atmosphere of nature.

**The modules are made of selected moss**, thanks to which individual tufts create a uniform, compact surface. In addition, the moss panels are **precisely cut and can be finished in a frameless manner** so that the joints and edges of the panels are not visible. Due to all of this panels produced by Scandinavian Moss give the interior an impressive, natural character.

# INSTALLING PANELS - INSTRUCTION

- 1 Installation of moss panels can be done by using:
  - dowels and screws,
  - mounting glue,
  - on a mounting strip for wall furniture.
- 2 We always start the installation from the corner panel.
- 3 Use a spirit level to determine the vertical and horizontal position of the first panel. Then the first panel can be attached.
- 4 When installing additional modules, keep ~2mm of dilatation between the tiles.
- 5 If necessary, the panels can be trimmed from the bottom (from the side of the flat surface, not finished with moss).

# INSTALLATION ACCESSORIES

WE OFFER BASIC ACCESSORIES FOR SELF-GLUING MOSS PANELS:

**Hot glue guns** intended for the most efficient sticks 30cm with a diameter of 12mm.

**Non-toxic floristic glue** with increased adhesion.

**Certified, Spanish fireproof and moisture-resistant cork**, with unbreakable granulate structure, used for the most demanding products.

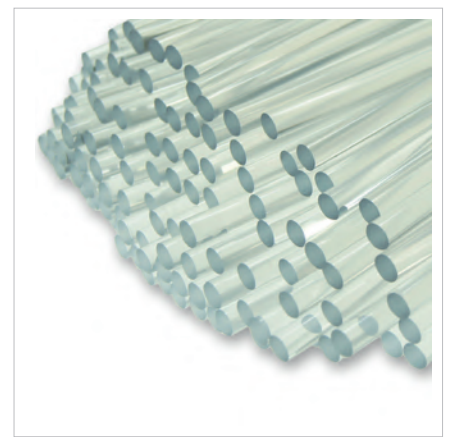

**Cork board (8mm)** with the declaration of B3 conformity. The material used is ecological, of natural origin, and does not emit toxic gases during combustion. The boards are available in sizes: 50x50cm and 100x50cm.

Cordless hot glue gun

Hot glue gun

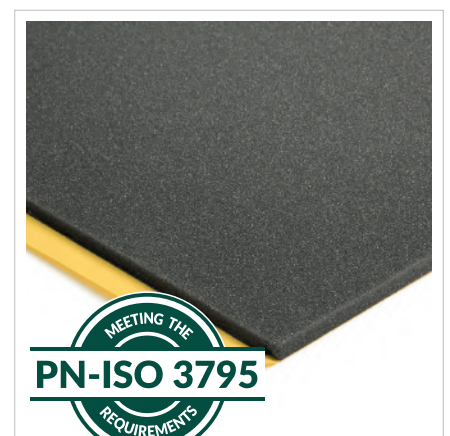

Floristic glue sticks EVA, Ø ca. 12mm

Cork board flex 8mm fireproof and moistureproof

Cork board hard 10mm fireproof and moistureproof

soundproofing board anti-vibration

# MOSS LOGO

**A moss logo is a modern and effective way of visual identification of a company that will attract the attention of viewers with its eco-design.** At Scandinavian Moss, we approach each project comprehensively and professionally - from creating a computer visualization of the logo, through precise reproduction of the original pattern, to professional installation of a ready logo inside your company.
